

Teleport Implementation Services: Cloud Migration

Deploy Teleport with Confidence

Complete your migration from an enterprise self-hosted environment to Teleport Enterprise Cloud, enabling you to see value with your new tenant as soon as possible. We will ensure your migration follows current best practices by engaging with our Teleport implementation experts for a swift and successful migration.

Key Activities

Your Teleport implementation team will review individual tasks for each milestone and provide continuous support to ensure that you can achieve your target timelines. We will leverage **weekly syncs** and a **dedicated Slack channel** so you can stay in touch with your Teleport team to resolve any issues swiftly. A **Teleport implementation engineer** will provide continued technical support through a consultative approach.

Materials

- A **running Teleport Enterprise environment** with connected business resources that can be accessed easily by your team
- An assigned **Implementation Engineer** and **Implementation Project Management** to drive your onboarding timelines, answer technical questions, and resolve blockers
- A collaborative **Implementation Plan** based on our implementation team's shared experience that is used to track progress, ensuring no critical action item gets missed

Engagement Requirements

Team Resources: At least one dedicated engineer from your team who will be responsible for working with the Teleport team and migrating Teleport in your infrastructure. Teleport may also require pulling in additional teams such as networking, security, and IT for a successful deployment.

Compute Resources: Calculating the necessary compute resources requires knowing several factors about your target architecture which will be determined by the implementation team. Refer to our architecture documentation to get a better understanding of compute requirements and terminology beforehand.

Timeframe: Our typical migration timeframe is 45 days from the first sync to Teleport Enterprise Cloud fully utilized by end users. We can achieve a faster migration if desired based on your team and compute resource availability.

45 DAY DURATION

Migration Milestones

- ✓ Migration Planning
- ✓ Migration of Teleport Resources
- ✓ Validating performance and use case execution
- ✓ Enabling Teleport end users to start using the new environment

Customers can save
over **\$20,000 a year***
in infrastructure costs
by switching to
Teleport Enterprise Cloud

* when compared to a scaled EC2 self-hosted enterprise deployment

Teleport Identity Governance

Protect identities across all of your infrastructure with Teleport.

Eliminate weak access patterns through access monitoring, minimize attack surface with access requests and purge unused permissions via mandatory access reviews.
